

Listeria in your environment can be a recurring headache.

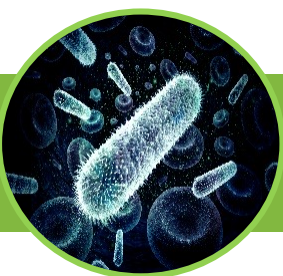

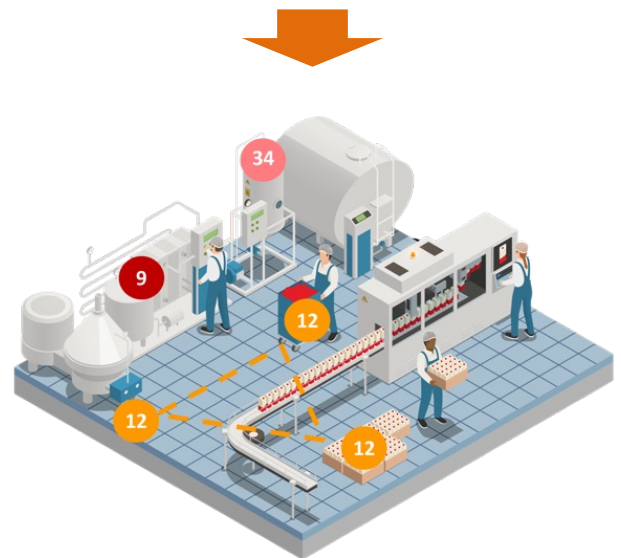

With the Listeria PatternAlert™ assay, it doesn't have to be.

The Listeria PatternAlert assay enables rapid identification of recurring patterns of *Listeria* contamination across locations and time.

Key Features

- Rapid identification of recurring Listeria patterns
- Direct from positive enrichment
- Follows standard screening methods – no change to your Listeria screening workflow
- No isolate required
- Company-specific patterns – no match to public database

Quickly identify and trace back sources of contamination
Rapidly target and eliminate Listeria harborage sites

Listeria PatternAlert™ Testing with Eurofins

With the Listeria PatternAlert™ method, instantly match *Listeria* patterns against your company-specific database to trace contamination to its source.

- Interactive Charts and Tables
- Personalized Database

Actionable results in 3 days or less

Detect *Listeria* through routine environmental screening

Process presumptive positive samples using the Rheonix Listeria PatternAlert™ Assay – directly from enriched sample

Use Listeria PatternAlert™ analysis tools to quickly identify recurring or persistent *Listeria*

See what's going on in your facility before it becomes a problem.
